Luxury Housing Sales Analysis – Bengaluru

1. Market Trends (Line Chart)

Insight:

I noticed that bookings are not constant across quarters. Some micro-markets show a clear increase in certain quarters, which means demand is seasonal. This suggests that buyers prefer to invest during specific time periods, possibly due to financial planning or market conditions.

2. Builder Performance (Bar Chart)

Insight:

From the chart, a few builders are generating much higher total sales compared to others. However, their average ticket price is not always the highest, which shows that volume of sales is more important than just high pricing.

3. Amenity Impact (Scatter Plot)

Insight:

I can see that projects with higher amenity scores tend to have better booking rates. This indicates that buyers in the luxury segment value amenities a lot, and it directly affects their decision to book.

4. Booking Conversion (Stacked Column)

Insight:

Some micro-markets have a higher percentage of successful bookings, while others have more drop-offs. This shows that not all locations perform equally, and certain areas are more attractive to buyers.

5. Configuration Demand (Pie Chart)

Insight:

The chart clearly shows that 3BHK units have the highest demand compared to other configurations. This means most buyers prefer a balance between space and affordability in the luxury segment.

6. Sales Channel Efficiency

Insight:

Certain sales channels contribute more to successful bookings than others. This suggests that some channels are more effective in converting leads into actual buyers.

7. Quarterly Builder Contribution (Matrix)

Insight:

I observed that some builders consistently perform well across all quarters, while others are strong only in specific periods. This indicates differences in marketing strategy and project timing.

8. Possession Status Analysis

Insight:

Projects that are ready for possession tend to have higher booking rates compared to under-construction ones. This shows that many buyers prefer less risk and quicker availability.

9. Geographical Insights (Map)

Insight:

The map shows that luxury housing projects are concentrated in specific micro-markets. This means development is not evenly spread, and certain areas are more premium and preferred.

10. Top Performers

Insight:

A small group of top builders contributes a large portion of total revenue and bookings. This indicates that the market is dominated by a few strong players.
